- BCI's objective is to become a significant player in the emerging Australian sulphate of potash (SOP) industry
- SOP is a high quality potassium-containing fertiliser, with attractive long term demand fundamentals linked to an increasing global population and a declining availability of arable land
- Carnegie is a potential large sub-surface brine deposit which could produce SOP via solar evaporation
- Joint Venture with a leading potash developer, Kalium Lakes Ltd, who is the Carnegie JV manager
- BCI has rights to earn up to a 50% JV interest in a staged manner by funding ~\$10M expenditure through to completion of a feasibility study

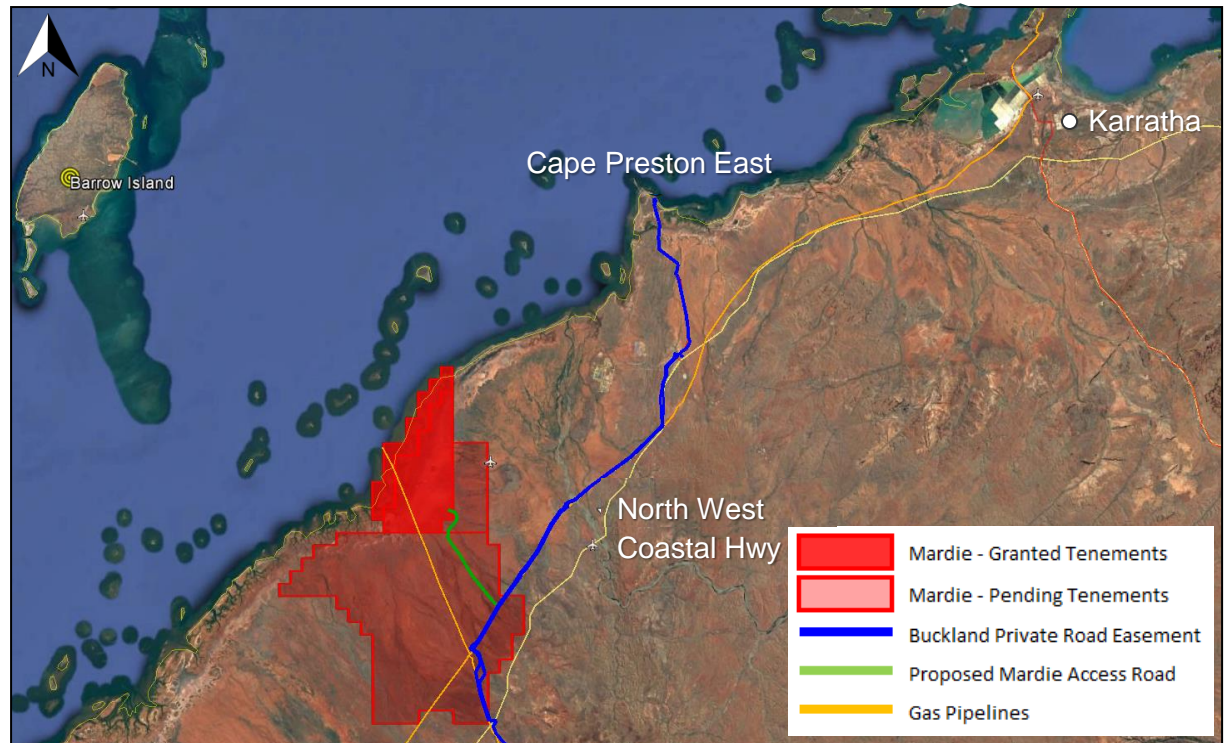

Australian SOP Peers

The Carnegie Potash Project can contribute significant value to BCI within 12 months as it progresses through the development phases

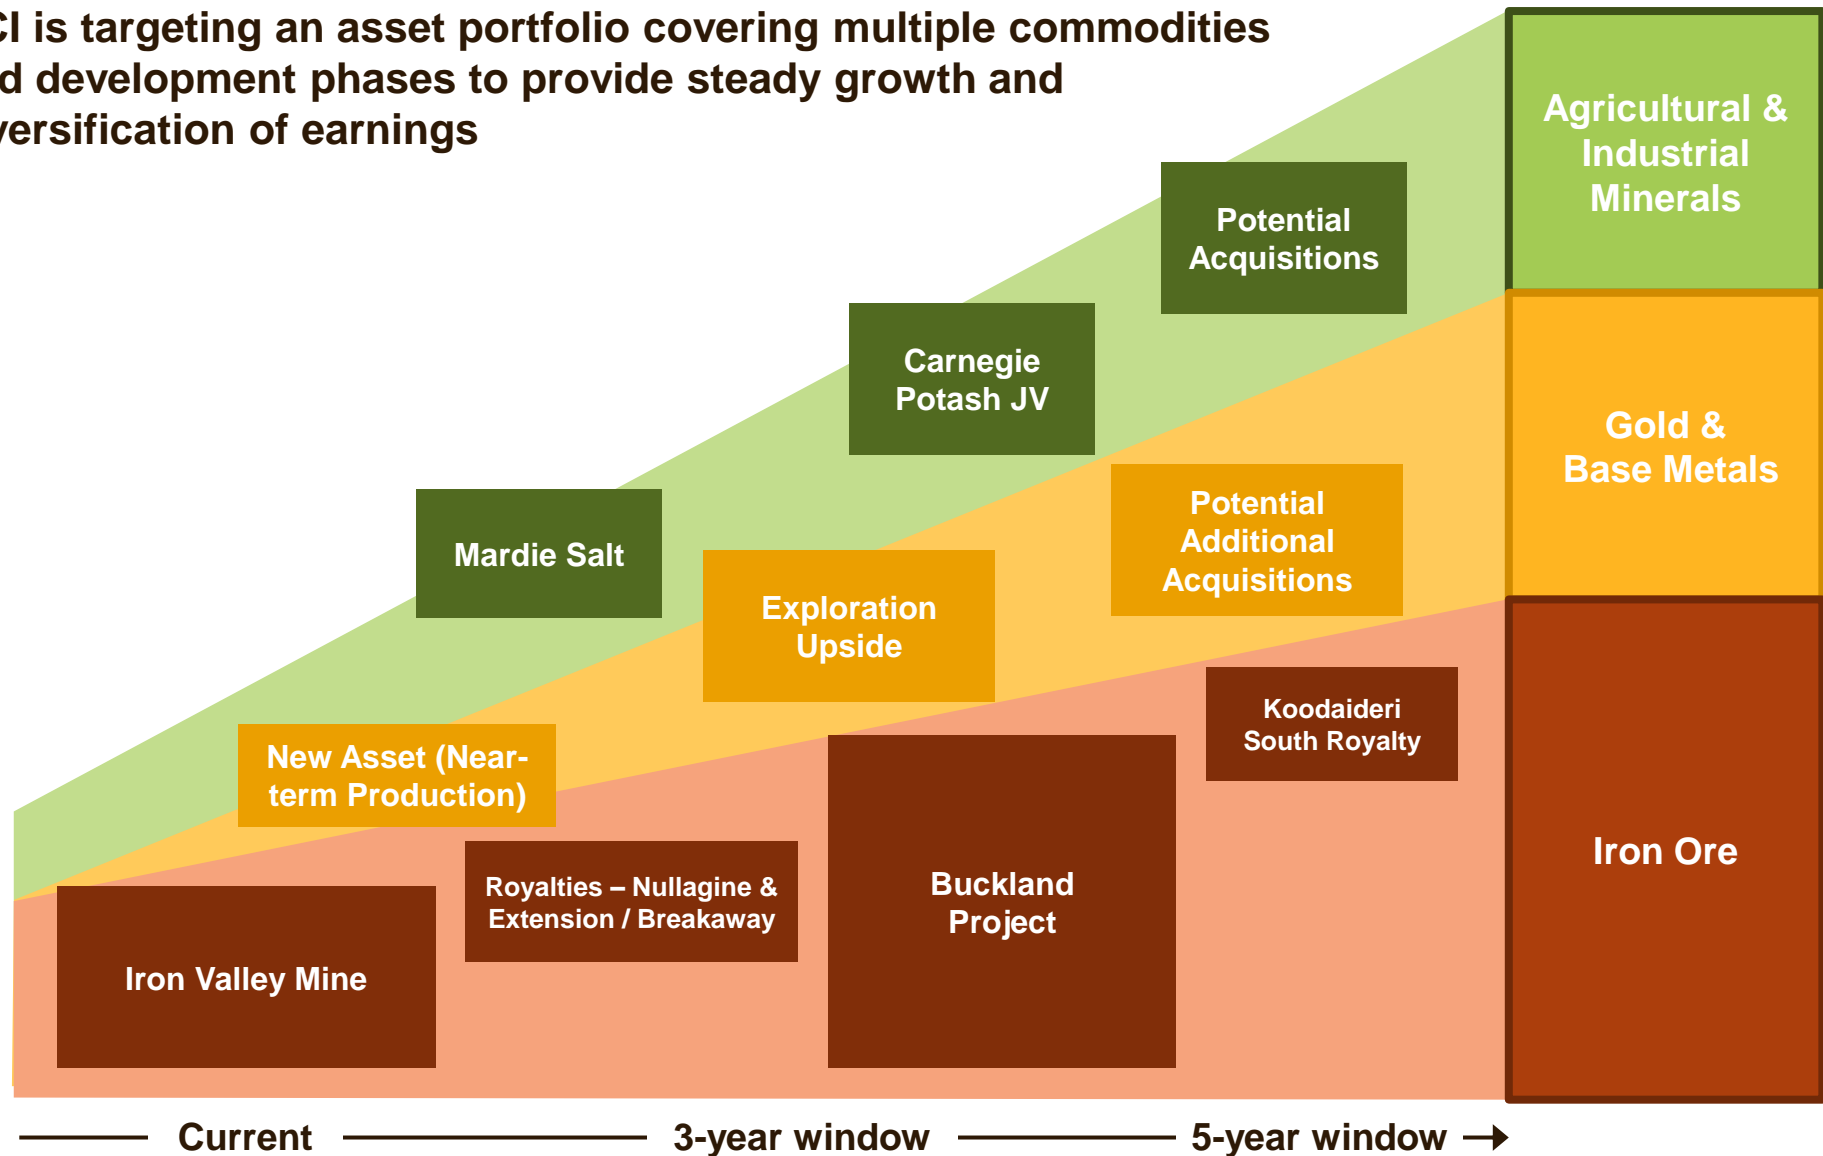

Mardie Salt

- Located on the Pilbara coast near BCI's proposed Cape Preston East port
- Site geometry allows natural inflow of seawater
- Excellent climate conditions for a solar salt evaporation operation
- Near existing infrastructure (North West Coastal Highway and gas pipelines)
- Scoping Study on a 3 Mtpa salt operation due in Jun-17 quarter

Building a Diversified Portfolio

BCI is targeting an asset portfolio covering multiple commodities and development phases to provide steady growth and diversification of earnings
