Milton Keynes Trial

Smart Parking Ltd (ASX:SPZ or **Company**) advises that it has secured a 300 sensor parking technology trial with Milton Keynes Council, Buckinghamshire, England.

The Company's RFID-equipped SmartEye vehicle detection sensors, linked via SmartLink data transmitters to the company's SmartRep management application, are being installed at a busy off-street location in Milton Keynes. The deployment will enable car park users to enter the barrier-less car park, pay, and walk away, with no need to return to their vehicle to display a ticket.

The deployment will include SmartApp, Smart Parking's app for iPhone and Android that enables drivers to check the number of available spaces in the location. The Company will also use its SmartRep software to provide trend analysis to Milton Keynes to maximise the effectiveness of management decisions.

In addition to the Milton Keynes trial as authorities globally seek to regulate and improve the management and movement of local traffic, the Company is undertaking several other trials including:

Trial Location	Description
Camden Council, London	280 on-street sensors installed with RFID capability
Prague	30 on-street sensors installed with RFID capability
Dubai	50 off-street sensors installed with RFID capability
Birmingham	100 on-street sensors installed
Madrid	30 on-street sensors installed with RFID capability
Tiels (The Netherlands)	100 on-street sensors installed with RFID capability
Berlin	50 off-street sensors to be installed with RFID capability
