RFID Technology – First Sales

Smart Parking Ltd (ASX: SPZ) (**Company**) is pleased to announce the first sale of its new radio frequency identification (**RFID**) technology to Westminster City Council, London (**WCC**). SPZ will be supplying the council with its RFID tag solution to enable the authority to better manage both disabled and residents parking bays.

The Company's RFID tag solution allows efficient and precise management of parking spaces within a defined area through the interaction between an RFID tag located on the relevant vehicle and the Company's in-ground parking sensor. It is a cashless, wireless, web based solution which has potential application for all permit parking environments including resident on-street parking as well as for corporate campuses, airports, hospitals, government and universities.

This initiative expands the Company's relationship with WCC. It is in addition to the installation of some 3,000 parking sensors in the London borough of Westminster which was carried out in 2014 as phase one of a two phase 10,000 parking sensor project.

Yours faithfully

A handwritten signature in black ink, appearing to read 'Jeremy King'.
