GOLD NL

ASX:TAM

Production, Performance, Profit...

30-31 March 2011

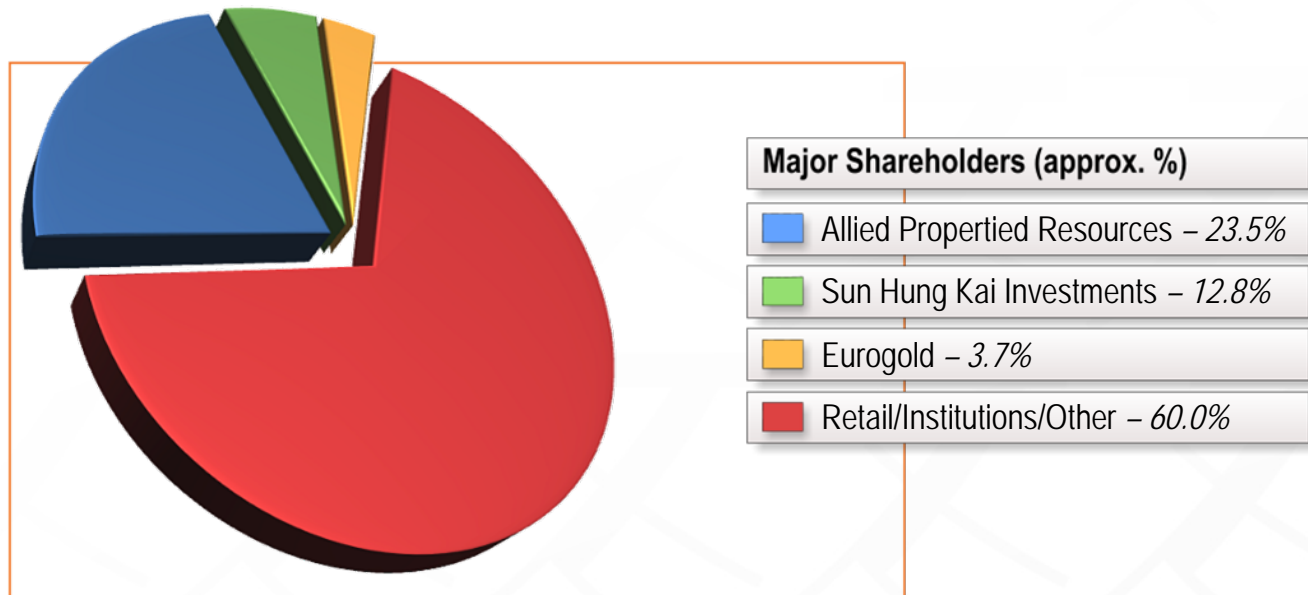

PAYDIRT GOLD CONFERENCE

Who is Tanami Gold NL?

- Australian gold company – 100% of assets in Australia
- Established production base with a clear path targeting 200,000oz per annum
- Current Resource inventory of over 2.0Mozs gold [75% Measured and Indicated]¹
- Mining licence areas, resource potential largely untapped
- Huge exploration upside - approx 5,000km² tenements with multiple targets
- Exploration budget of \$15 million per annum
- Completed two major corporate transactions in 2010

**Tanami Gold NL is ticking boxes on its path to
200,000ozs gold per annum ✓**

Item	Value
Share Price	A\$0.91 cents ¹
Shares Outstanding	260.9 million
Market Capitalisation	A\$238 million
Cash and cash equivalents	A\$6.8 million ²
Debt	A\$16.2 million ²
Enterprise Value	A\$247million

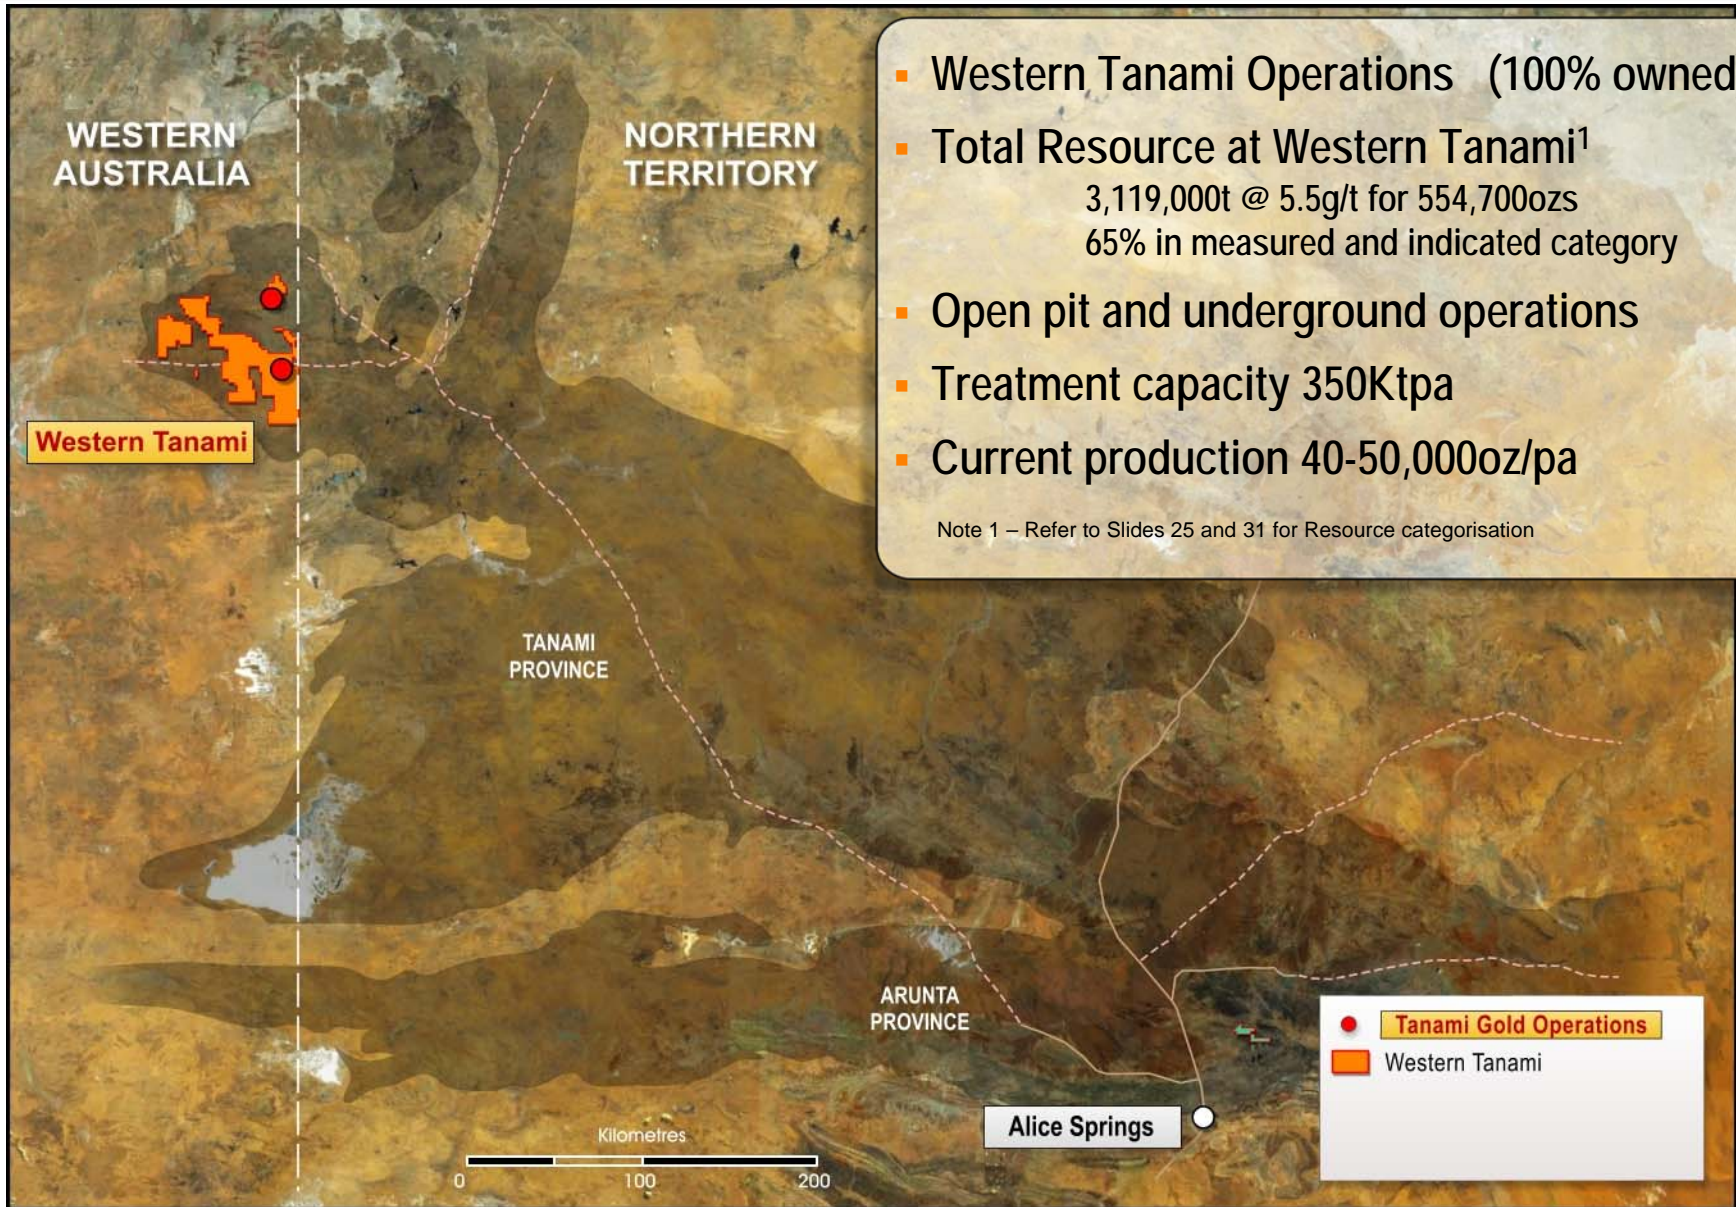

Note 1 - Share price at 17 March 2011

Note 2 - As at 11 March 2011

Tanami Gold NL - Key Assets

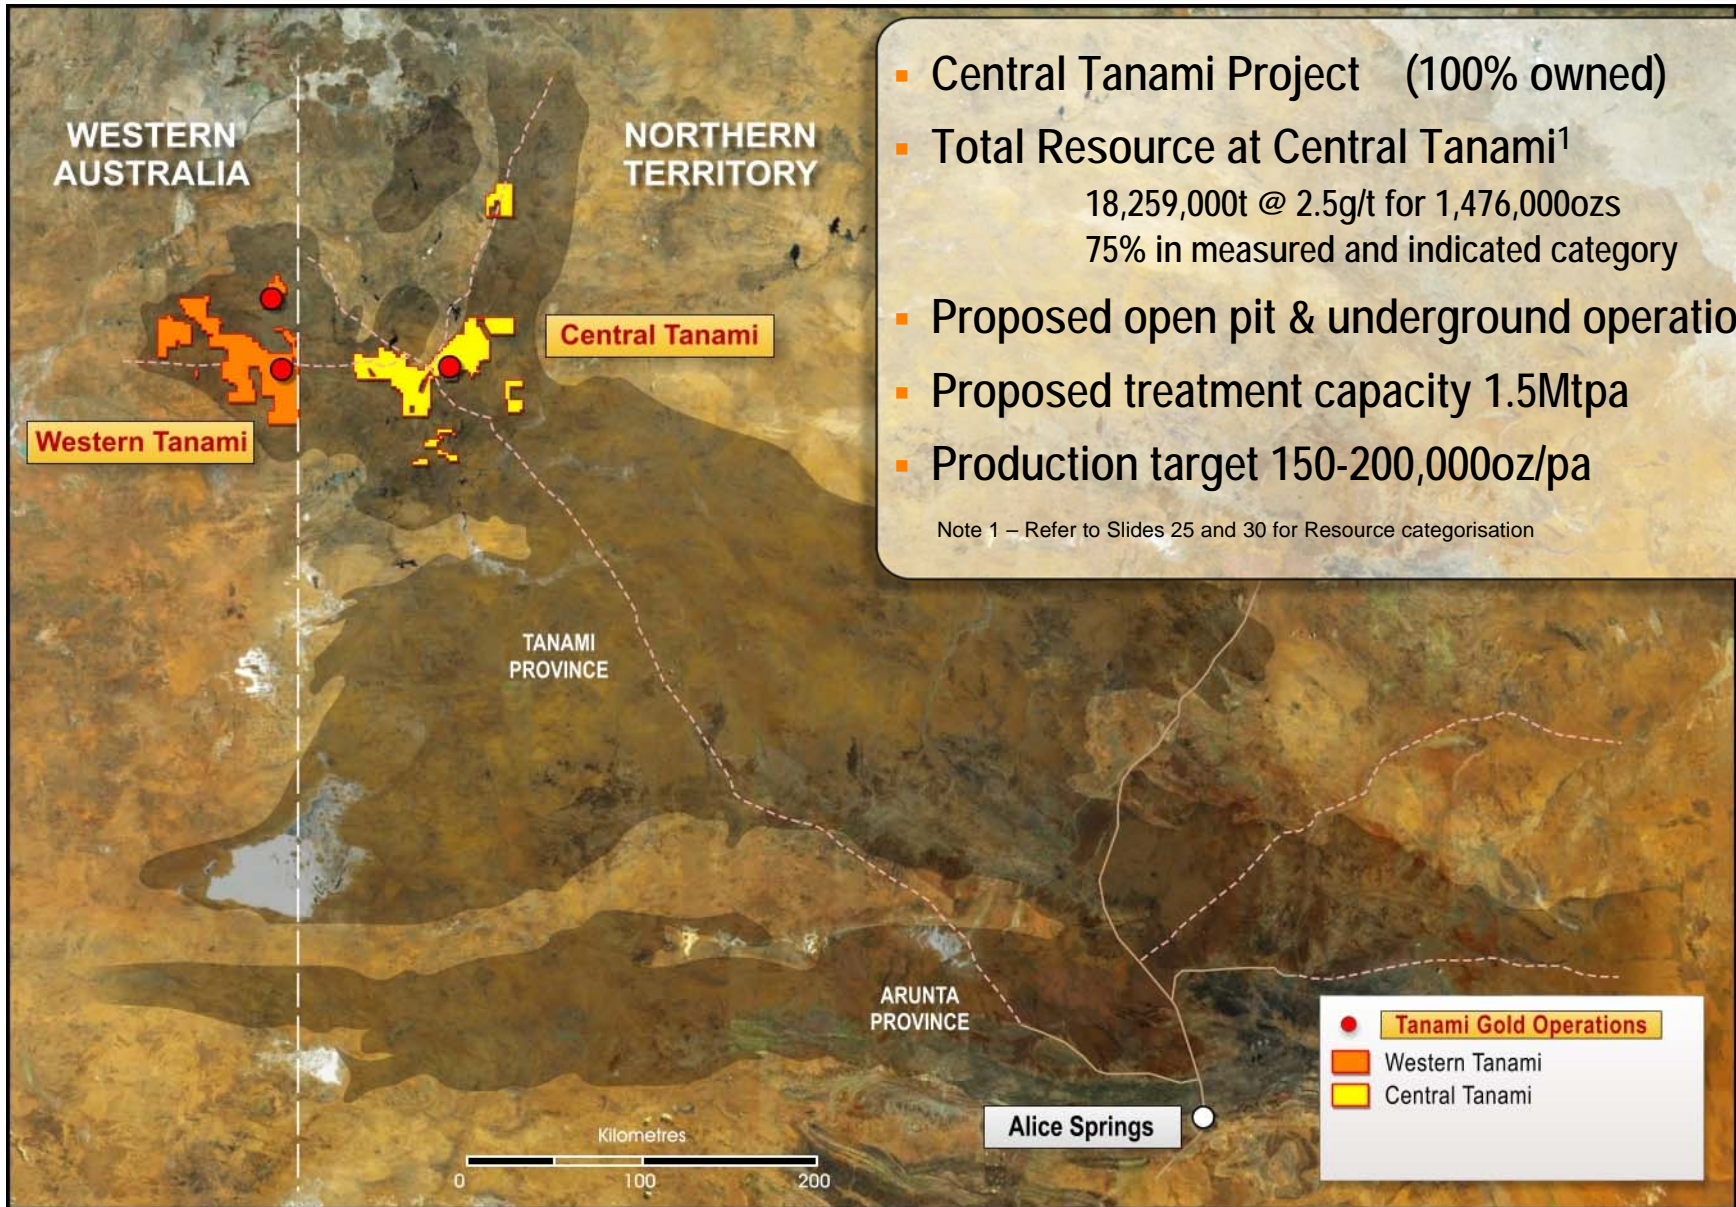

Tanami Gold NL – Key Assets

- Western Tanami Operations (100% owned)
- Total Resource at Western Tanami¹
3,119,000t @ 5.5g/t for 554,700ozs
65% in measured and indicated category
- Open pit and underground operations
- Treatment capacity 350Ktpa
- Current production 40-50,000oz/pa

Note 1 – Refer to Slides 25 and 31 for Resource categorisation

Tanami Gold NL – Key Assets

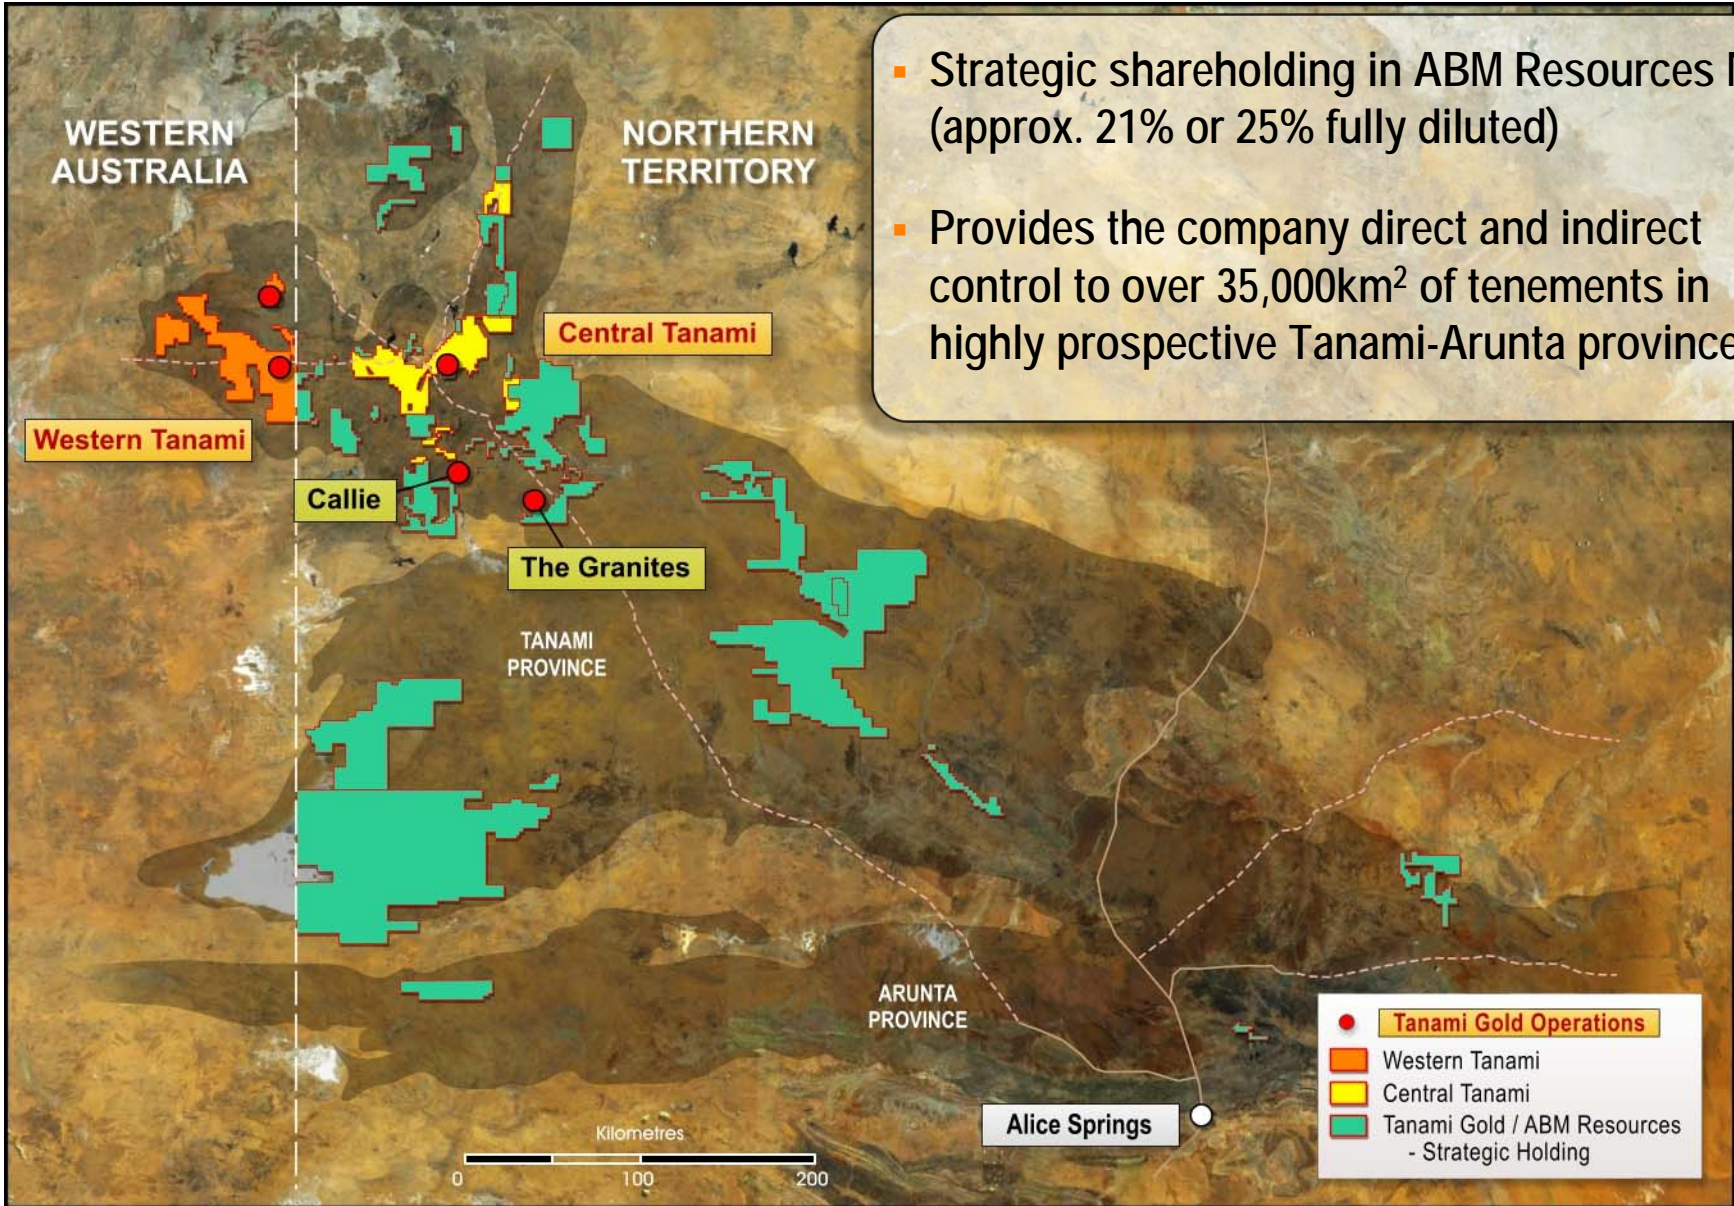

- Central Tanami Project (100% owned)
- Total Resource at Central Tanami¹
18,259,000t @ 2.5g/t for 1,476,000ozs
75% in measured and indicated category
- Proposed open pit & underground operations
- Proposed treatment capacity 1.5Mtpa
- Production target 150-200,000oz/pa

Note 1 – Refer to Slides 25 and 30 for Resource categorisation

Tanami Gold NL - Key Assets

- Strategic shareholding in ABM Resources NL (approx. 21% or 25% fully diluted)
- Provides the company direct and indirect control to over 35,000km² of tenements in highly prospective Tanami-Arunta province

The Tanami Trio – Immediate cash flow, substantial production growth, outstanding exploration potential

Western Tanami – Coyote Operations

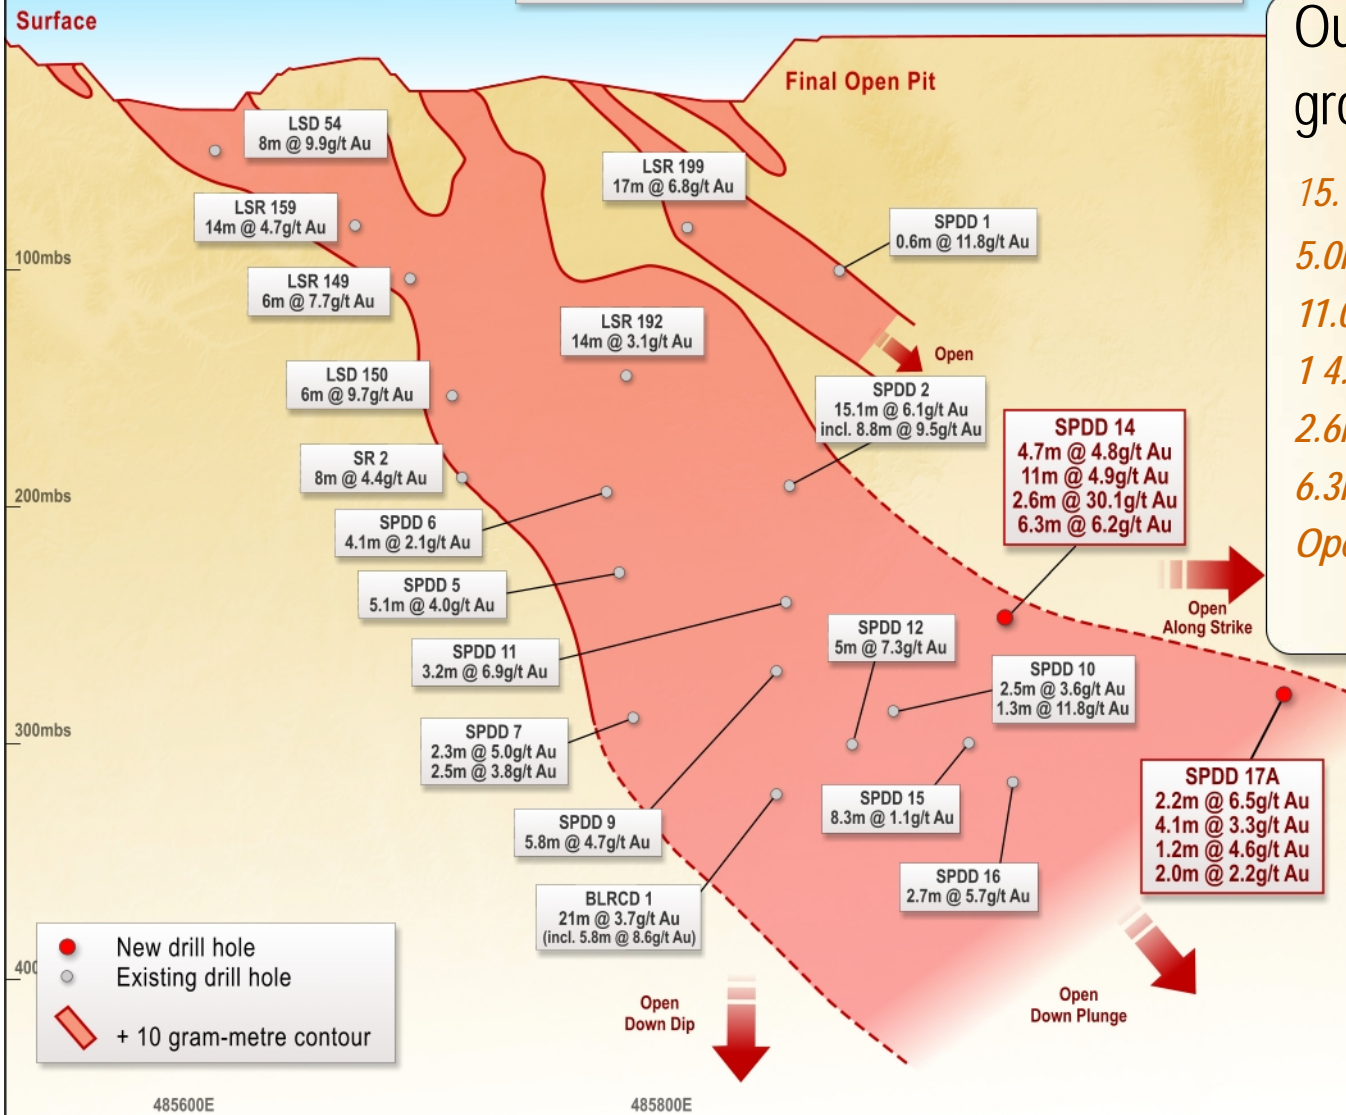

- 35km north of Western Tanami treatment plant
- Two open pits – Sandpiper and Kookaburra
- Mining recommenced late Nov'10
- Important - Host rocks equivalent to Dead Bullock Formation
- Recent exploration success highlights underground potential

Bald Hill - Sandpiper Underground Potential

**Sandpiper Deposit - Schematic Composite Long Section
(showing significant down-hole intersections)**

Outstanding underground growth potential:

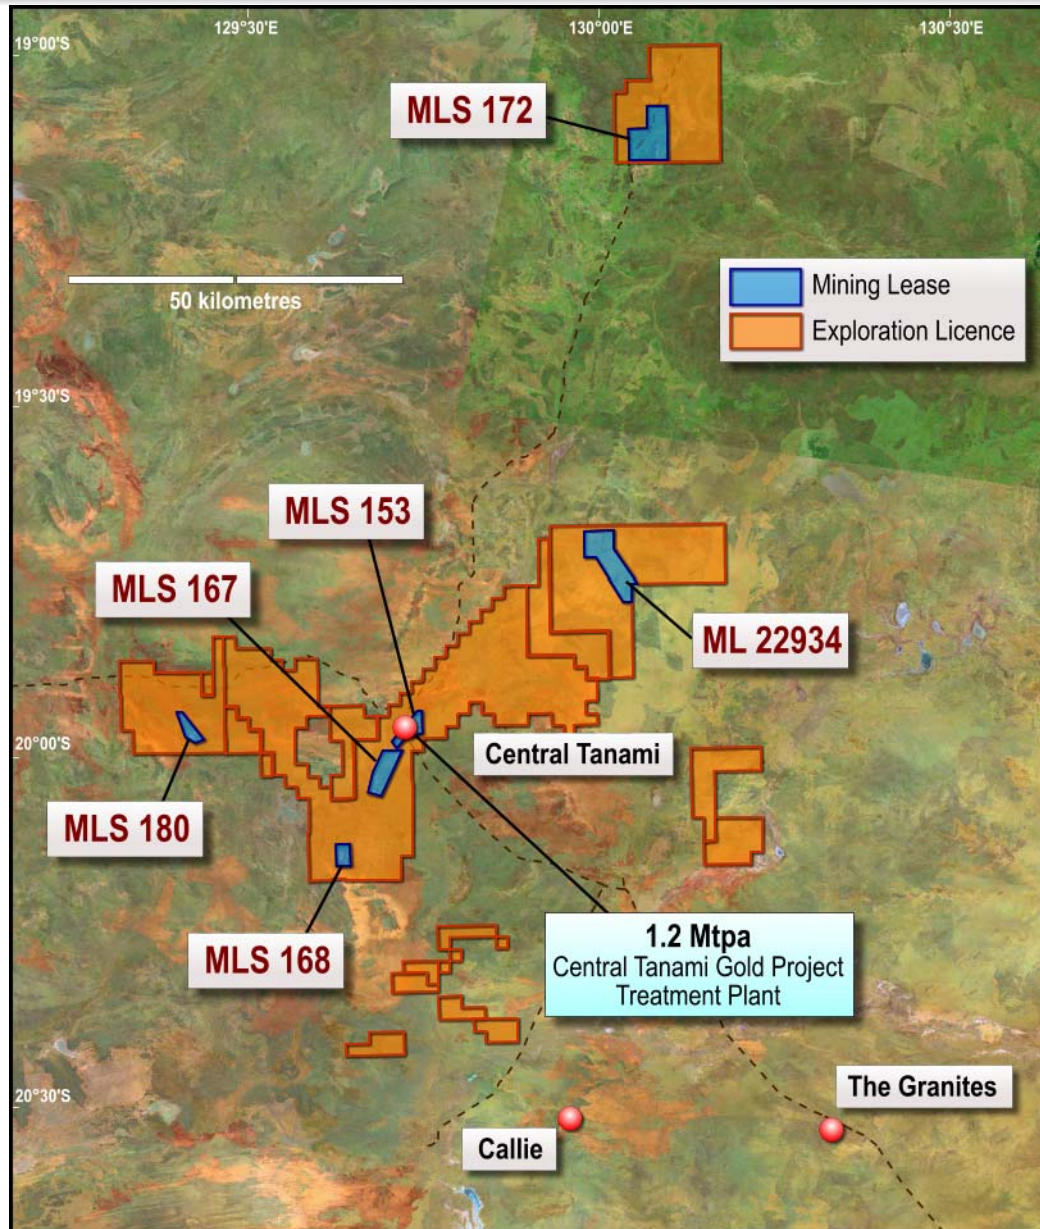

15.1m @ 6.1g/t Au incl 8.8m @ 9.5g/t
5.0m @ 7.3g/t Au
11.0m @ 4.9g/t Au incl 0.8m @ 34.2g/t
1 4.7m @ 4.8g/t Au
2.6m @ 30.1g/t Au incl 0.6m @ 118.1g/t
6.3m @ 6.2g/t Au
Open down plunge.....

Central Tanami Project

- Acquired from Newmont for \$22M
 - *Immediate Resource upgrade purchase price \$21/oz zero value assigned to treatment plant / infrastructure / exploration*
- Acquisition includes:
 - *0.5Mozs JORC Resource (2010)*
 - *1.2Mtpa treatment plant and extensive infrastructure*
 - *~ 2,000 km² exploration package*
 - *~ 2.1Moz historic production endowment*

ANY QUESTIONS?

Production, Performance, Potential...

Building a 200,000oz per annum Australian gold producer

30-31 March 2011

PAYDIRT GOLD CONFERENCE

Disclaimer & Forward-Looking Statements

- Certain statements contained in this presentation, including information as to the future financial or operating performance of Tanami Gold NL and its projects, are forward-looking statements. Such forward-looking statements:
 - *are necessarily based upon a number of estimates and assumptions that, while considered reasonable by Tanami Gold NL, are inherently subject to significant technical, business, economic, competitive, political and social uncertainties and contingencies;*
 - *involve known and unknown risks and uncertainties that could cause actual events or results to differ materially from estimated or anticipated events or results reflected in such forward-looking statements; and*
 - *may include, among other things, statements regarding targets, estimates and assumptions in respect of metal production and prices, operating costs and results, capital expenditures, mineral reserves, mineral resources, anticipated grades, recovery rates, and are or may be based on assumptions and estimates related to future technical, economic, market, political, social and other conditions.*
- Tanami Gold NL disclaims any intent or obligation to update publicly any forward-looking statements whether as a result of new information, future events or results or otherwise.
- The words 'believe', 'expect', 'anticipate', 'indicate', 'contemplate', 'target', 'plan', 'intends', 'continue', 'budget', 'estimate', 'may', 'will', 'schedule' and similar expressions identify forward-looking statements.
- All forward-looking statements made in this presentation are qualified by the foregoing cautionary statements. Investors are cautioned that forward-looking statements are not guarantees of future performance and accordingly investors are cautioned not to put undue reliance on forward-looking statements due to the inherent uncertainty therein.

Competent Person's Statement

The information in this report pertaining to Exploration Results and Mineral Resources is based on information compiled and reviewed by Mr Robert Henderson, a full time employee and Geology Manager of Tanami Gold NL. Mr Henderson is a member of the Australasian Institute of Mining and Metallurgy and the Australian Institute of Geoscientists and has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration to qualify as a Competent Person as defined in the December 2004 edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code). Mr Henderson consents to the inclusion in this report of the matters based on his information in the form and context in which they appear.

Central Tanami Resources as at Dec 2010

Deposit	Measured		Indicated		Inferred		Total		Ounces

Total CTP	7,416,000	2.3	6,424,000	2.7	4,319,000	2.7	18,259,000	2.5	1,476,000

- Resource estimations completed using MineMap, Vulcan and Micromine software packages comprising a combination of ellipsoidal inverse distance and ordinary kriging grade interpolation methods.
- Grade estimation was constrained to material within >0.5g/t mineralisation outlines.
- Variable gold assay top cuts were applied based on geostatistical parameters and historical production reconciliation.
- Resources reported above 0.7g/t block model grade.
- Resources reported above 2.5g/t block grade for mineralisation at the Carbine deposit, within MLS167, occurring below the southern plunge extent of a design pit shell optimised at A\$1350 per ounce gold price.
- Stockpile figures from previously reported Otter Gold Mines NL 2001 Mineral Resource estimate less recorded treatment by Newmont Asia Pacific.
- Tonnes and ounces rounded to the nearest thousand and grade rounded to 0.1g/t. Rounding may affect tallies.
- The information in this report pertaining to Mineral Resources for the Central Tanami Project was compiled by Mr Bill Makar (MAusIMM), former Chief Mine Geologist for Otter Gold Mines Limited Tanami Mine Joint Venture, Mr Steven Nicholls (MAIG), former Senior Geologist for Tanami Gold NL and Mr Peter Ball (MAusIMM), Director of Datageo Geological Consultants. Mr Makar, Mr Nicholls and Mr Ball have sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration to qualify as Competent Persons as defined in the December 2004 edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code). Mr Makar, Mr Nicholls and Mr Ball consent to the inclusion in this report of the matters based on their information in the form and context in which it appears.

Western Tanami Resources as at June 2010

Notes to accompany Table - Western Tanami Resources as at June 2010

- The Mineral Resource Estimate is reported at a 1g/t Au lower cut-off.
- Tonnes are rounded to the nearest thousand and grade to 0.1g/t. Rounding may affect tallies.
- Deposit ounces rounded to nearest thousand. Stockpile ounces rounded to nearest hundred.
- Resource estimation of Coyote and Sandpiper deposits was completed by Mr Steven Nicholls, a full time employee of Tanami Gold NL.
- The Kookaburra Resource estimation was conducted by Mr Peter Ball of Datageo Geological Consultants.
- The Pebbles Resource estimate was completed in 2007 by Mr Malcolm Titley of CSA Australia Pty Ltd.
- Mr Nicholls (MAIG), Mr Ball (MAUSIMM) and Mr Titley (MAUSIMM, MAIG) qualify as Competent Persons as defined by the December 2004 edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code) and have given permission for the inclusion in this report of the matters based on their information in the form and context in which it appears.
- The Resource estimations were completed using Micromine, Surpac and Datamine software, comprising an inverse distance grade interpolation within block model constrained by 3D wireframed geological boundaries. The wireframes defining the mineralisation were based on structural, assay and lithological information. Various top cuts have been applied to the drill hole samples based on lode domain analysis, with the exception of Kookaburra where the effect of top cutting was deemed immaterial. Where top cuts were applied they ranged from 35g/t for Sandpiper to 120g/t for Coyote. The search constraints applied to the grade estimation were controlled by the orientation of the lodes and the known dip and plunge of the mineralisation within the lodes based on geological knowledge and mining experience.
- The Resource estimations used bulk density measurements conducted on a deposit scale and broken down by regolith profile. As such the density measurements applied were based on test work applicable to the deposit of interest. These ranged from 2.00 t/m³ (base of transported) to 2.72t/m³ (Fresh rock).
- The Resource has been depleted for mining undertaken at the Coyote, Sandpiper and Kookaburra mines during the period 1 July 2009 to 30 June 2010.
- The Measured Resource at Coyote has been based on the high level of confidence of the location and grade of mineralisation between the current underground development drives. The development drives have typically six metres separation. The Sandpiper and Kookaburra Measured Resource has been based on a 10 metre distance below the current pit floor, which is supported by a combination of mining at the base of the pits, and five metre deep grade control drilling below the floor of the pit.

Western Tanami Project - Hutch’s Find significant intersections from recent drilling

Hole Number	Collar Easting	Collar Northing	Collar RL	Collar Dip	Collar Azimuth	Hole Depth (m)	Significant Intersections		
							Interval	Length (m)	Grade (g/t)
HFRC1	463560	7790150	410	-60	180	133	98m to 117m	19	2.3
							123m to 133m (eoh)	10	5.4
							Inc 123m to 128m	5	9.6

Notes

- Collar Northing, Easting and Azimuth are all in AMG Grid coordinates. Collar positions may vary slightly upon final survey location.
- Analyses by 50g fire assay with AAS finish.
- No cutting of grades has been applied. Assays are rounded to nearest 0.1g/t.
- Intervals reported are greater than 1g/t with maximum 2 metres internal waste.
- Interval length is down hole length.
