VTEM Survey Update - West Musgrave Project

Australian exploration company Cassini Resources Limited reports that it has been advised that the VTEM survey at the Company's 100% West Musgrave Project in WA, previously scheduled to commence in early March 2013, has been delayed until mid-March 2013.

VTEM surveys are weather dependent and the delay is due to adverse weather conditions associated with Tropical Cyclone Rusty impacting the completion of geophysical surveys currently being performed by the contractor, UTS Geophysics.

The Company will provide further updates as information comes to hand.

About Cassini

Cassini Resources Limited (ASX:CZI) is an Australian resource exploration company that successfully listed on the ASX in January 2012 with an asset package of prospective tenements and applications in Western Australia. In May 2012, Cassini added three gold exploration projects in Nevada, USA, via Joint Venture agreements with Renaissance Gold Inc. (TSX:REN).

Cassini has a dual focus, with gold exploration projects in Nevada (USA) and nickel, copper and gold prospects in Western Australia.

The Nevada projects represent a near term opportunity for exploration success in one of the world's pre-eminent mining jurisdictions. Nevada has a history of recent multi-million ounce discoveries despite a mining history of over 150 years.

Cassini's priority Western Australian project is located in the highly regarded West Musgrave region, with limited previous exploration and potentially high reward.

Cassini aims to explore and progress its key projects, and to identify additional projects that are commercially attractive with the aim to increase shareholder value.
