

## Thalanga Operational Update

Red River Resources Limited (ASX: RVR) (“Red River” or the “Company”) has placed its Thalanga Zinc Project on standby due to the severe weather conditions in Northern Queensland.

Access roads to Thalanga Operations have been temporarily restricted, impacting the ability of Red River to safely move operational staff to and from Charters Towers to site. A skeleton crew will remain onsite whilst operations remain on standby.

Production activities at site, particularly the underground mining operations at West 45, have been negatively impacted by the weather conditions and associated grid power outages over the past two months and a slower than expected transition from development to stoping ore resulting in lower than expected underground ore production and reduced concentrate production.

The Company expects to recommence full site operations early next week.

### About Red River Resources (ASX: RVR)

RVR is the leading ASX pure play zinc producer, with its key asset being the high quality Thalanga Zinc Project in Central Queensland. RVR commenced concentrate production at the Thalanga Zinc Project in September 2017 and RVR is focused on maximising returns from the Project by increasing plant throughput and extending mine life through increasing Mineral Resources and Ore Reserves at deposits currently in the mine plan (West 45, Thalanga Far West and Waterloo), by potentially converting Mineral Resources into Ore Reserves at Liontown and Orient and by continuing to aggressively explore our growing pipeline of high quality targets within the surrounding area.

On behalf of the Board,

**Mel Palancian**  
**Managing Director**  
Red River Resources Limited
