

Thalanga Operational Update

Red River Resources Limited (ASX: RVR) (“Red River” or the “Company”) advises that production at its Thalanga Operation is expected to be impacted while mechanical repairs are undertaken at the processing plant.

The secondary crusher was shut down on the 12th of September and repairs are underway. The repair process involves removal and disassembly of the crusher, expediting replacement components, fabrication and machining then assembly and reinstatement. The Company is minimising the impact on quarterly production by implementing a bypass to the secondary crusher and operating at reduced tonnage. Production is expected to be approximately 30 per cent less than in the July 2019 Quarter which was a record for the Company. Full process plant production is expected to resume from the start of October.

Whilst the secondary crusher is being repaired, underground mine production will continue uninterrupted.

About Red River Resources (ASX: RVR)

RVR is seeking to build a multi-asset operating business focused on base and precious metals with the objective of delivering prosperity through lean and clever resource development.

RVR’s foundation asset is the Thalanga Base Metal Operation in Northern Queensland, which was acquired in 2014 and where RVR commenced copper, lead and zinc concentrate production in September 2017.

RVR has recently acquired the high-grade Hillgrove Gold-Antimony Project in New South Wales, which will enable RVR to build a multi-asset operating business focused on base and precious metals.

On behalf of the Board,

Mel Palancian

Managing Director
