## **Clean TeQ Aromatrix awarded \$1.9M in odour control contracts in Queensland.**

Clean TeQ Holdings Ltd (ASX: CLQ) is pleased to announce that the air purification subsidiary, Clean TeQ Aromatrix Pty Ltd ('CTX'), has been awarded two significant air pollution control projects to a value of \$1.9M.

The contracts are for the design, manufacture and installation of CTX's OdourTeQ® BioTrickling Filter at one site and ThermTeQ® regenerative thermal oxidiser technologies at the other site for the control of air emissions.

With these projects, CTX now has contracts in hand totalling \$6.4 million. The projects are to be delivered over the 2015 and 2016 financial years. CTX continues to aggressively bid projects and maintains a strong pipeline of potential projects supporting a solid revenue basis in 2016.

In South East Queensland, CTX has been selected for the provision of extraction duct and Air Treatment Facility (ATF) to treat odorous and corrosive gases generated at a sewage treatment plant. The ATF, part of the larger sewage plant upgrade project, is a significant and essential component of the plant upgrade.

Also in South East Queensland, CTX has been contracted to replace an existing thermal treatment system treating food odour emissions with our ThermTeQ® regenerative thermal oxidiser (RTO). The ThermTeQ® system uses up to 95% less fuel than conventional afterburners. With the forecasted gas prices expected to increase, the ThermTeQ® approach is technology that meets today's economic needs. Also delivering a significant reduction in greenhouse emissions, the environmental objectives of the process upgrade are also achieved.

Mr Matthew Lakey, Managing Director of CTX, commented:

"Being able to supply our customer with the best solution from our suite of air emission control technologies is something that we are all really proud of. It illustrates the breadth of our technology suite and their applications to a wide range of air pollution control issues. It also illustrates our ability to work across both wastewater and industrial applications supporting our reputation as a leader in air pollution control".
